

LOCATION: 700-A-253

HYDRAULIC CONDITIONS: Apparent Confined Bedrock Aquifer

PERTINENT OBSERVATIONS: Drilled to 187', encountered bedrock at 149' (Orejon Andesite), no water observed while drilling to 187' or in open borehole after overnight recovery. Drilled to 287', encountered limestone (Panther Seep Formation?) at 206', then minor amounts of Orejon Andesite first appeared at 280'. No water was observed while drilling to 287'. Measured water level in open borehole the following morning at 182.50' (ground surface). Installed well and measured water level in cased borehole at 175.70' (T.O.C.).
