

AIR COMPRESSOR MONITORING

WELL NUMBER: 700-F-455

| DATE     | FILTER # | FLOW RATE | DURATION OF SAMPLING | TOTAL VOLUME OF AIR | COMPRESSOR (M/A) | SAMPLE INTERVAL | FILTER ANALYSIS RESULTS |
|----------|----------|-----------|----------------------|---------------------|------------------|-----------------|-------------------------|
| 10/01/90 | XX       | 3L/min    | 60 min               | 180L                | M                | 191'-196'       | +0.0027                 |
| 10/01/90 | XIX      | 3L/min    | 60 min               | 180L                | A                | 212'-219'       | +0.0086                 |
| 10/03/90 | VII      | 3L/min    | 70 min               | 210L                | M                | 228'-238'       | +0.0064                 |
| 10/03/90 | *        |           |                      |                     |                  |                 |                         |
|          |          |           |                      |                     |                  |                 |                         |
|          |          |           |                      |                     |                  |                 |                         |
|          |          |           |                      |                     |                  |                 |                         |

|          |          |           |                      |                     |                  |                 |                         |
|          |          |           |                      |                     |                  |                 |                         |
|          |          |           |                      |                     |                  |                 |                         |
|          |          |           |                      |                     |                  |                 |                         |

All filter analyses performed by WSTF Chemistry Lab.  
 Results given in grams.  
 Net weight change of filters deemed insignificant by WSTF Chemistry Lab.

\*Line to monitoring device ruptures

Rig filters were changed prior to drilling this hole, however this is not documented in the field book.
