

LOCATION: BLM-17-550

HYDRAULIC CONDITIONS: Confined, alluvial aquifer

PERTINENT OBSERVATIONS: Drilled from 70' to 390', let recover overnight and detected no water. Drilled from 390' to 600' and observed formation water produced at 560' and 585' when joints were added to drill stem. Completed drilling at 600' and well continued to produce water when blowing foam and cuttings from hole. Let recover overnight and measured water level at 461.64' TSC.
