

Lithologic Log Addendum

Well ST-3-586

Cuttings of the lithologic unit from wells ST-3-666 and ST-3-735 were sent to the Department of Geological Sciences, New Mexico State University (NMSU), Las Cruces, New Mexico, for detailed petrographic analysis when identification of fine-grained, highly altered volcanic rocks at the NASA-WSTF site became difficult using conventional field methods. Petrographic reports from NMSU were received after the printing of these lithologic logs, hence the need for this addendum. Cuttings from ST-3-586 were never sent for petrographic analysis but are assumed to be of the same lithology as ST-3-666 and ST-3-735 because of their close proximity.

Previous unit name based on field identification: **Tuff**

New Unit name based on information from adjacent wells: **Andesite**
